Later Nasopharyngeal Swab/Throat Swab and swab from skin lesion 1 & 2 samples were found to be Positive for Mpox virus (Clade- I) by NIV Pune on 01.04.2026. The first follow up specimens were tested for Mpox virus by Real time PCR assay. NPS/ TS found positive from NIV Pune on 03.04.26. The second follow up specimens were tested for Mpox virus by Real time PCR assay. Throat Swab found positive from NIV Pune on 14.04.26. The third follow up specimens were tested for Mpox virus by Real time PCR assay. Throat Swab found positive from NIV Pune on 20.04.26. The fourth follow up specimens were tested for Mpox virus by Real time PCR assay. Throat Swab found positive from NIV Pune on 25.04.26. The fifth follow up specimens were send to
---------------------------	---------------	------------------	----------------------------	----------	----------	-------------------	-------------------------------	--

								NIV Pune on 29.04.26 – results awaiting. At present, he is under home isolation.
NL/MOK/2026/14/567	Nagaland	Mokokchung	Scrub Typhus	14	0	02-03-2026	Under Surveillance	Cases of fever with body pain and nausea were reported from Sub-District Ongpangkong and Changtongya, District Mokokchung. District RRT investigated the outbreak. House to house survey was done. Cases were treated at Imkongliba Memorial District Hospital. The affected age group was 1-77 years. All 14 blood samples collected, tested positive for <i>O. tsutsugamushi</i> by RDT. Further, 9 serum samples collected for IgM ELISA testing and sent to SSSL, NHAK, Kohima, tested negative for scrub typhus. Source reduction activities were done. Community awareness and health education was given by the peripheral team on vector control measures, hygiene and sanitation.

OR/MAY/2026/14/568	Odisha	Mayurbhanj	Acute Diarrhoeal Disease	14	0	31-01-2026	Under Control	Cases of loose motion and vomiting were reported from District Mayurbhanj. District RRT investigated the outbreak. House-to-house survey was done. Cases were treated at CHC Kisantandi. Medicine and ORS packets were given to the cases. Cases were in the age group 9-15 years. 2 water and 3 rectal swab samples were tested at DPHL Mayurbhanj. No enteropathogenic organism was found in the culture test of the rectal swab samples. Water samples showed OT<0.001 PPM and H ₂ S positive. The suspected source of infection was the canteen food. Chlorination of water sources was done. Community awareness and health education was given by the peripheral team on safe drinking water, hygiene and sanitation.
